

# Clorious2 Dosing Skid

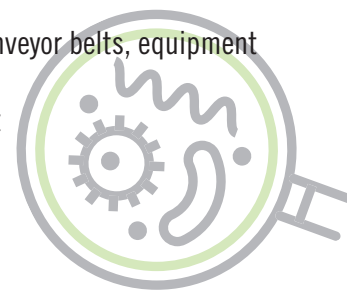

the ingenious dosing unit  
for chlorine dioxide as an oxidizer and disinfectant  
for water treatment.

## Your challenge / our mission:

- ➔ technology for safer and correct dosing
- ➔ assuring the smooth operation after initial start

- removal of biofilm from piping, tanks, conveyor belts, equipment
- disinfection of process and cooling water
- drinking water and wastewater treatment
- CIP
- fungal and algae control
- legionella management

Ready to use - Safe and easy - Accurate dosing

As a distributor of chlorine dioxide in a transportable and ready-made form, we provide the long-standing need to use this product in a safe and easy way.

Now Tensio provides also the technology to dose safely and correctly in a fully automated manner and ensures a proper operation after placing into service.

The excellent properties and benefits makes Clorious2 the ideal oxidation and disinfectant for water treatment. It can immediately be dosed in closed circuit.

It is the medium of choice in the food & beverage supply chain to remove biofilm and prevent it from coming back without building up any tolerance.

# Clorious2 Dosing Skid

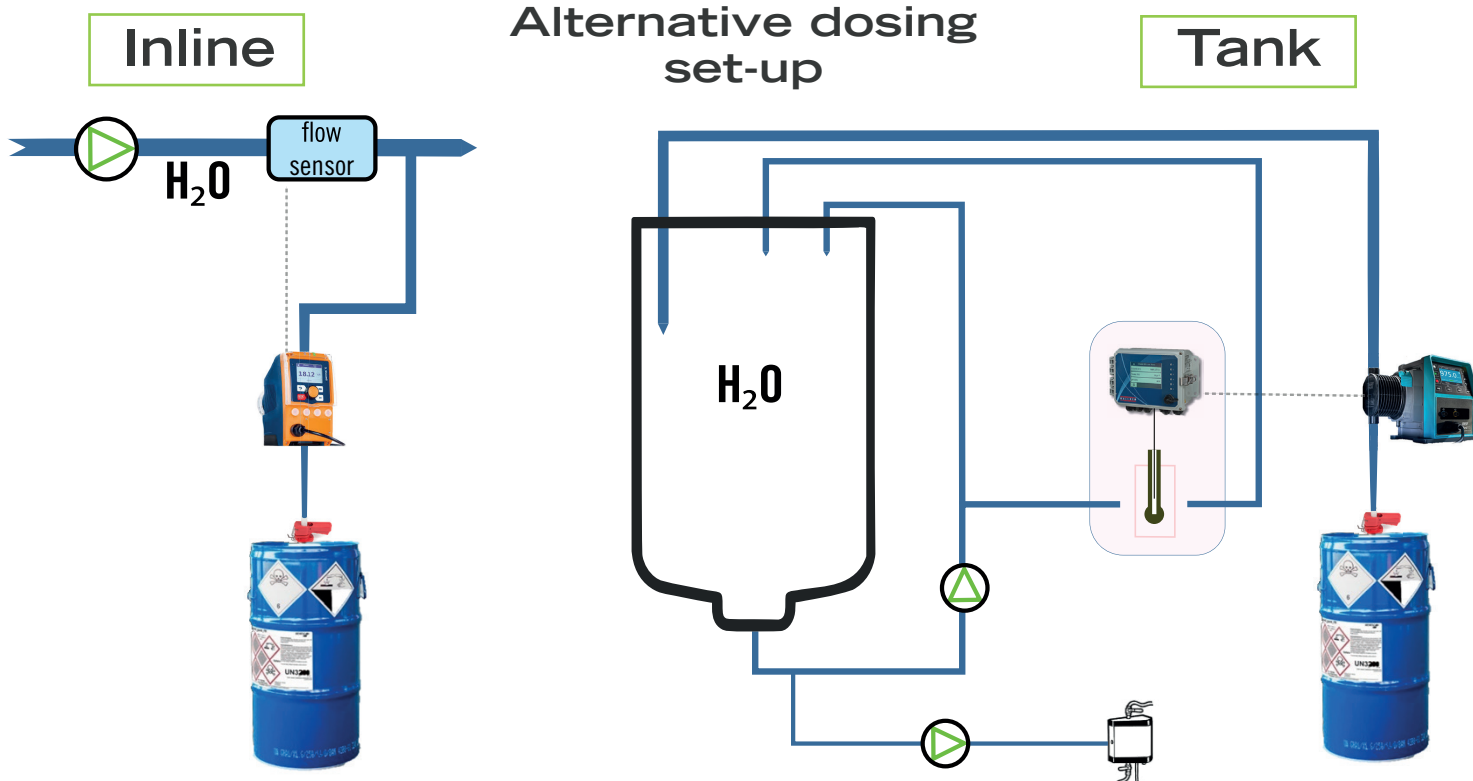

Basic Operating Principle:

Clorious2 is extracted from the packaging by a dedicated dispensing system - CDS Coupler - which ensures dry coupling and decoupling with no exposure to the chemical and maximizing safety on the work floor.

Clorious2 is dosed at the programmed concentration by means of a metering pump. The dosing itself is controlled by a signal from the flow-meter on the main water stream.
