

SECTOR

Developed from a 100% Belgian family holding group in the bakery sector to ten production sites both at home and abroad, with an export capacity to more than 25 countries, largely via its own sales subsidiaries. Their long-term vision is mainly characterised by their entrepreneurship and innovation, as well as a contagious passion for its products and customers.

CHALLENGE

Problems with dosing and microbiological residues were identified on the crate washer.

SOLUTION

A **dosing unit ADU-C** was installed on the crate washer. The installation of this Tensio dosing system meant the dosing problems were a thing of the past.

Concentration and dosing were subsequently being continuously monitored. The microbiological pollution was also resolved.

RESULT

As this entire conversion process was completed within a very short period of time and was subsequently carefully followed up by us, it resulted in true added value for the customer.

Our service goes way beyond being a mere chemical supplier. We think along with our customers and provide practical solutions.
